

## GOD'S WORD

The Land (singular)

**Gen. 1:9**

The Sea – **Gen. 1:7-9**

Vegetation

**Gen. 1:11-12**

Sea Life

**Gen. 1:20-21**

Birds – **Gen. 1:20-21**

Animals – **Gen. 1:24-25**

Humans – **Gen. 1:27**

## CONVENTIONAL SCIENTIFIC HYPHOTISIS

4.5 Billion years ago – Earth is forming as a molten ball of fire. Granite forms as the building base rock of all the continents. Seas form, possibly as a result of comets bringing water to the new planet from above.

3.5 Billion years ago – Life in water leaves deposits called Stromatolites

1.0 Billion years ago – Granite formations become one giant barren rocky land mass which science calls Rhodinia.

700 Million years ago – Earth cools and becomes an ice ball, and only bacteria and algae can live. Oxygen is forming.

650 Million years ago – Ice becomes one mile thick over the whole Earth. The surface temperature becomes minus 40 degrees.

530 Million years ago – Volcanism causes ice to breakup, oxygen increases, and an explosion of life occurs. All life forms emerge in this Cambrian era. This single land mass, with life, is now called Pangaea by science.

400 Million years ago – Oxygen increases, and Ozone forms, which protects life from the Sun's harmful ultraviolet light.

300 Million years ago – Carboniferous era – trees and jungles form today's coal deposits. Insects rule, and oxygen levels rise. Amphibians develop, followed later on by reptiles.

---

The Flood – all die, and Earth broken (2,550 BC)

**Gen. 7:11**

Noah and family land and migrate from Near-East in various directions.

250 Million Years ago – 95% of life species go extinct due to the Siberian mantle eruption, vulcanization, and poisonous gases escaping.

180 Million years ago – Continents continue to split, and increasing carbon dioxide causes global warming, resulting in tropical forests, even at the poles.

150 Million years ago – Life evolved to dinosaurs as oxygen increases, and life from this era forms today's oil deposits. Earth's magnetic field keeps declining, and needs recharging.

---

Earth is further divided Peleg (2,380 BC)

**Gen. 10:25**

People migrate to all parts of earth – **Gen. 11:8**

65 Million years ago – 75% of all species go extinct, including the dinosaurs, as a result of a meteor impact. A meteor triggers volcanic activity and toxic dust. Core reversals recharge the magnetic field.

50 Million years ago – Mammals begin to flourish. The world's great mountain ranges form as continents, and Earth's plates, collide.

---

Earth is further divided **Joshua 10:13-14** (1400 BC)

**Isaiah 24:1, 19**

Major Earth movements **Isaiah 38:8** (701 BC) (701 BC – the world's calendars go from 360 days to 365)

6 Million years ago – Grand Canyon is being up-lifted, and eroded, at the same time. Earth's magnetic field loses strength, and needs recharging frequently. Earth's magnetic field is recharged by core reversals.

2 Million years ago – Ice age begins, and man emerges from Africa / Near East. Ice age is caused by sea currents being disrupted by the formation of Panama. Ice in New York is as high as the Empire State Building. Earth's magnetic field is recharged every so often by core reversals.

## SCIENTIFIC EVIDENCE

Granite must form in a cold state. To this day, no one knows how the granite formed, and no one knows where the water came from. Stromatolites are lumps, or lobes, of rock, and these are still being deposited even today.

All science agrees that the land was originally one large mass.

Science is split on previous ice ages. Some say yes, some say no. Earth was supposedly still too hot for ice to form, according to many scientists.

Fossil evidence shows all life forms in this Cambrian sedimentary layer. Sedimentary layers are formed by water deposition, containing no radiometric dating material. Science agrees that oxygen levels in the past were higher, but there are no fossils which show evolution. Fossils of same kind are found in more than one layer. These layers have no radiometric dating material to determine age.

---

All science agrees on the land splitting up. The argument is over the time scale, and whether global warming, or crustal displacement, caused the vegetation at the poles.

There is no evidence of Macro-evolution in the fossil record, only Micro-evolution within species. Even today, dinosaur bones are not yet fossilized, and reveal testable DNA.

---

These meteor impacts, along with the earth's crust breaking up, could explain why the earth's magnetic field keeps recharging. The iridium layer exists all over the earth. Science agrees mountain ranges are the result of continental movement.

---

Some scientists theorize the Grand Canyon is the result of great flooding. Some scientists believe land moves slowly (millions of years). Others theorize that the earth's crust has moved massively due to crustal displacement, or Mars fly-bys, thus recharging the Earth's magnetic field. There is no evidence for core reversals.

---

TODAY – Lands are moving slowly, but could move massively. Note that God's Word tells us that the earth broke up dramatically over an 1,800 year period. The basic difference between the science based on evidence, and the science based on theory, is **time and age** of the earth and life. A short time frame points to a Creator God, which is not acceptable to the conventional community of theoretic science.
